

Expert, cost-effective EMS services from JJS Electronics in Central Europe

For manufacturers striving to compete in today's European marketplace, reliable local expertise is essential. Now an established manufacturing presence in the Czech Republic, JJS Electronics s.r.o. is helping the region to service escalating demand with the most comprehensive EMS offering it has seen to date.

Part of a €30m group of specialist electronics companies, JJS has a proven track record in delivering the world-class services companies need to compete successfully in the European marketplace. From prototype and pre-production units, through to volume manufacturing and demand-driven logistics, the EMS specialist's 4,500 sq. Metre Chomutov facility has built a reputation for quality and is well equipped to meet a wide variety of end user demands. Plus, located only 15km from the border with Germany, the site is ideally placed to satisfy the demands of high profile businesses in neighbouring areas keen to take advantage of the value represented by this lower-cost region.

Commenting on the unique capabilities JJS offers customers in the Czech Republic and beyond, Operations Director Derek Williams explains: "Here at JJS, we believe our extensive electronics, engineering and manufacturing skills are unparalleled in the Czech Republic which explains why the business has taken off to the extent it has since we launched here in 2005. Prior to this, local EMS companies were limited – so we have introduced a sense of international ownership that's incredibly important to this market. Businesses in the region are thriving, meaning that reliable local EMS

capabilities are essential to ongoing success. Plus, our service represents a major opportunity for neighbouring countries to partner with a world class organisation on their doorstep. We're continually investing in our resources to ensure JJS remains a competitive and compelling service proposition for our European customers in the future."

JJS delivers a full range of EMS services including design for test, design for manufacturing, PCB assembly, box build assembly, precision mechanical assembly and full system assembly. The company's comprehensive logistics and after-market solutions include direct shipments to end users, returns processing and product repair. In addition, every JJS service is supported by robust material procurement, inventory management, component engineering and test expertise; all carried out by the company's highly qualified and experienced specialist teams.
